Subject: Work Plan for today. 11 12 2014.
Date: Wednesday, November 12, 2014 6:55:34 AM

Gary:

I went over your list with Frank. We currently have enough crew for two operations simultaneously, once we complete VB 406 and RO 620. However, we believe that the South AST Secondary Containment will take the majority if not all of the crew.

Our work plan for today is Start VB 406. The debris will be placed in the OT roll off for contaminated debris. The small amount of liquids will be placed in the current VB 25242. We will move on to RO 620, liquids will be moved to FT 1001 if oily or FT 5180 if watery. This debris will be placed on poly sheeting in the warehouse.

We will clean up the working bays and stretch out and repair the Adler Plastic containment and lay out the protective tracks. We also have 2 loads going to EcoServ from FT 1002.

I have some questions about the material from the AST South Containment. My understanding is that we will be placing this material in a sludge box using the air mover. Tomorrow we will move on to cleaning the sediments using the skid steer and sweeper. The material will be placed on poly with the other poly piles near the South Pond.

Subject: Re: WWT area

Leroy:

I am not exactly sure what you are asking or saying.

My priorities remain:

- 1. ASTs/Frac Tanks/Main Warehouse Bays**
- 2. Drums/Totes**
- 3. WWT Tank Area**

I need you plan (personnel and equipment) needed to do these tasks in more of a simultaneous manner. You need to get that to me by Thursday COB.

We do need to cleanup the sediment in the north pond area so that we can hopefully eventually begin to allow stormwater to drain down the drain in that area. It needs to be cleaned up very good.

The metal debris in the bays should be deconed and left for salvage. All others debris in the bays should be deconed and placed in roll-off for hopefully non-haz disposal.

Thanks

Subject: WWT area

Gary:

We appreciate the go ahead with the disposal of the nonhazardous waters in wastewater treatment area. Prior to removal of this material, we would like to complete the removal of the water in the North Pond, the cleanup of the loading docks of the warehouse and a general removal of waste materials, between the loading dock and the wastewater tanks. The secondary containment should also be cleaned. We would like clarification of placement of the debris, as we remove it, and clean it. Are we leaving the debris or should we set it into roll off containers for disposal?
